

Abstract

A method is described for monitoring the operating readiness of memory elements (18, 20) which are assigned to an electronic unit (10), an engine control unit (10) for example. Furthermore, an electronic unit (10) for executing the method and a computer program, as well as a computer program product are described. In the method described, a supply voltage of the electronic unit (10) is monitored to ensure error-free operation of the memory elements (18, 20).
